Cambridge Radiology and Cancer Imaging Patient and Public Involvement Group

Would you like to make a difference to cancer research and patient care?

Why is imaging research needed?

The Cambridge Radiology and Cancer Imaging Programme aims to use specialised imaging tests, such as MRI, CT or PET scans to improve cancer imaging and treatment methods for patients. The purpose of this group is to shape the direction of programmes research activities keeping the interest of patients and the public front and centre.

Why do we need to work together?

Patients, the public and researchers work together to:

- Listen and act on patient experiences
- Prioritise research that is important to patients
- Reflect the diversity of the community
- Enhance research relevance and impact
- Support communication and engagement

Time commitment

One main meeting per year (online), followed by smaller meetings as and when required.

Location

Online or if in person on the Cambridge Biomedical Campus.

What does the group do?

Opportunities may include:

- Collaborating on documents for patients
- Providing feedback on research design
- Sharing your insights and perspectives
- Supporting study and trial design
- Raising awareness through community outreach

Expenses

Travel and involvement expenses will be reimbursed.
